Quiz I

1. Let x be a random variable that can take on values $1, 2, \dots, N$. Suppose you have n i.i.d. observations x_1, x_2, \dots, x_n that come from the likelihood distribution $f(x|\theta) = \theta(1 - \theta)^{\sum_{i=1}^n x_i}$. Let the prior distribution of θ be $Beta(a, b)$ with fixed parameters a, b . Show that the posterior distribution is also a $Beta$. What are the parameters of the posterior distribution?

(The $Beta$ distribution has the form $Beta(a, b) = \frac{\Gamma(a+b)}{\Gamma(a)\Gamma(b)} \theta^{a-1} (1 - \theta)^{b-1}$.)
